1. (Currently amended) A rowing surf board comprising:

a board having two through holes defined through the board and

located at two sides of the board, an oar extending through each of the through

holes and pivotably engaged with the board at the through hole, each oar having a

blade portion which is pivotably connected thereto such that the blade portion is

pivoted to reduce a contact area against water when the blade portion is moved

forward;

the board having at least a pair of slots formed in an underside

thereof, each blade portion being retractable to a fully recessed position within one

of the slots.

2. (Currently amended) The rowing surf board as claimed in claim 1,

wherein two first slots are defined in a top of the board and communicate with the

two through holes respectively, two second the slots defined in the an underside of

the board being second slots and communicating with the two through holes

respectively, each the first slot and the second slot sharing a common axis with

one of the second slots so that each of the oars is received concurrently therein the

first slot and the second slot.

3. (Original) The rowing surf board as claimed in claim 1, wherein a

plurality of bosses extend from an inside of each of the first slots.

4. (Original) The rowing surf board as claimed in claim 1, wherein each of the oars includes a connection portion, a first section and a second section, the

connection portion including a passage defined transversely therethrough and a pin

extending through the passage and fixedly connected to the board, the first section

connected to the connection portion and located above the board, the second

section connected to the connection portion and located below the board, the blade

portion pivotably connected to the second section.

5. (Original) The rowing surf board as claimed in claim 4, wherein each of

the blade portions has two lugs extending from a side thereof and the second

section is pivotably connected to the two lugs.

6. (Original) The rowing surf board as claimed in claim 5, wherein each

of the blade portions has a recessed portion defined between the two lugs and the

second section is removably engaged with the recessed portion.

7. (Currently amended) A The rowing surf board as claimed in claim 4,

comprising:

a board having two through holes defined through the board and

located at two sides of the board, an oar extending through each of the through

holes and pivotably engaged with the board at the through hole, each oar having a

blade portion which is pivotably connected thereto such that the blade portion is

pivoted to reduce a contact area against water when the blade portion is moved

forward;
